Software

Maximum Controllability

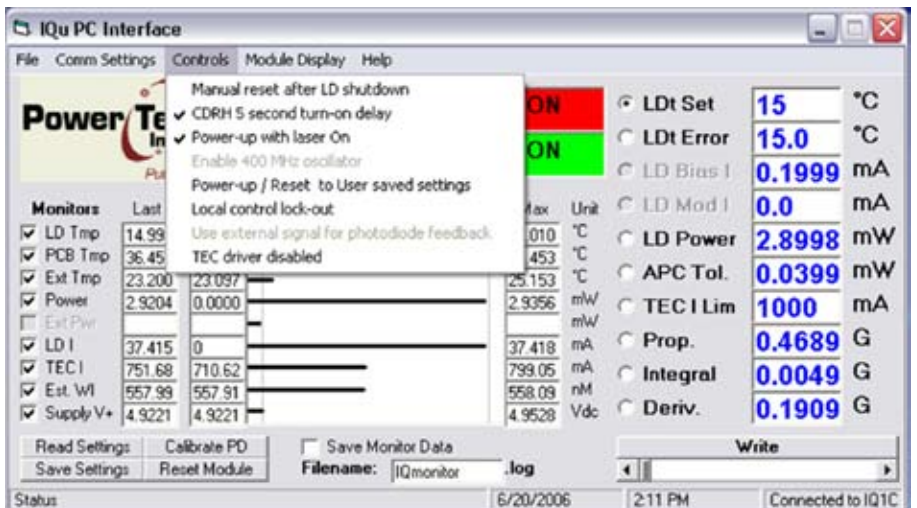

**NEW
PRODUCT!**

Power Technology's new IQ μ PC Interface software offers the user a wealth of resources to maximize the controllability of the IQ μ which is already one of the most stable and controllable modules in the industry.

The IQ μ software enables the module to function more precisely by enabling the user to more effectively monitor and

manipulate settings consistently to achieve more desirable results from the module. The software is PC compatible. Windows 98 and later are required to run the software through a RS232 connector or an optional USB interface. Call one of our sales engineers today to discover how your IQ μ can reach its fullest potential!
