

# 532nm Single Frequency DPSS Laser

with *Pitch Perfect* German Engineering

The Symphony™ series of lasers are high power diode pumped solid state laser systems (DPSS) that emit single frequency green laser light at 532nm.

These systems are based on Power Technology's patented *iMAT*™ laser technology providing diffraction limited beam quality, intrinsic single longitudinal mode output and industry leading optical performance all in a compact, proprietary design.

Applications include holography, vibrometry, particle visualization, Ti:Sapphire laser pumping and forensics.
